关注

截至目前，深圳已建成或封顶的200+摩天大楼数量为138座，数量排名全球第一

除了平安金融中心599.05米和京基100是441.8米之外，高度300 - 400米的有15座，其中华润大厦392.5米，深业上城产业研发大厦388.1米，信兴广场383.95米；高度在200 - 300米的摩天大楼深圳也有121座。

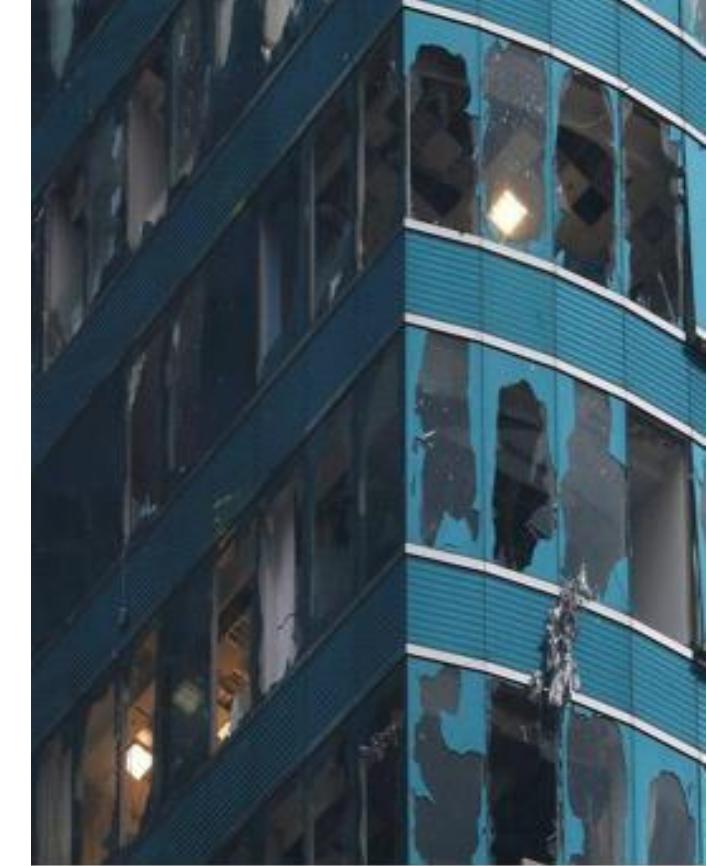

深圳是我国的经济特区，已经成为一个有国际影响力的城市。现在的深圳已经是中国超高层最多的城市了，据统计，深圳200米高楼 121幢 300米15幢，400米1幢，500米1幢，第一高楼是592米的平安金融中心。

Shenzhen has the most skyscrapers in China.

Data and Methodology

Station ID	Station Name	Height above ground (m)	Meteorological elements used	Duration of wind speed data
G1101	Tower F1	10	gust, awind, T	Oct 2016 - Jan 2020
G1102	Tower F2	20	gust, awind	Oct 2016 - Jan 2020
G1103	Tower F3	40	gust, awind	Oct 2016 - Jan 2020
G1104	Tower F4	50	gust, awind	Oct 2016 - Jan 2020
G1105	Tower F5	80	gust, awind	Oct 2016 - Jan 2020
G1106	Tower F6	100	gust, awind	Oct 2016 - Jan 2020
G1107	Tower F7	150	gust, awind	Oct 2016 - Jan 2020
G1108	Tower F8	160	gust, awind	Oct 2016 - Jan 2020
G1109	Tower F9	200	gust, awind	Oct 2016 - Jan 2020
G1110	Tower F10	250	gust, awind	Oct 2016 - Jan 2020
G1111	Tower F11	300	gust, awind	Oct 2016 - Jan 2020
G1112	Tower F12	320	gust, awind	Oct 2016 - Jan 2020
G1113	Tower F13	350	gust, awind	Oct 2016 - Jan 2020
G3519	Ping An Building	570	gust, awind	Aug 2018 - Jan 2021
G3773	Central Park	14	gust, awind, T	Aug 2018 - Jan 2021

The wind data used in this study are the maximum 10 min average wind speeds (avg-wind speed) and the maximum 3 sec wind speeds (gust wind speed) within an hour observed at the stations.

The locations of the Meteorological Gradient Tower and Ping An Building, and the Central Park

Data and Methodology

Power law equation:

$$\frac{V}{V_0} = \left(\frac{H}{H_0} \right)^\alpha$$

V : wind speed at the height H
 V_0 : wind speed at the height H_0
 α : Hellman coefficient

$$\alpha = \frac{\lg(V/V_0)}{\lg(H/H_0)}$$

Least square estimation

The Hellmann coefficient depends upon roughness and atmospheric stability.

location	α
Unstable air above open water surface:	0.06
Neutral air above open water surface:	0.10
Stable air above open water surface:	0.27
Unstable air above flat open coast:	0.11
Neutral air above flat open coast:	0.16
Stable air above flat open coast:	0.40
Unstable air above human inhabited areas:	0.27
Neutral air above human inhabited areas:	0.34
Stable air above human inhabited areas:	0.60

Results and Discussions

Boxplots of the wind observations at the 13 stations on Shenzhen Meteorological Tower from 1 October 2016 to 1 January 2020.

(a) for gust wind speed; (b) for avg-wind speed.

For each subplot, the means (**medians**) of the wind samples at different height levels are marked by **green dots (lines)** in the interquartile box, and the **mean values** at different heights are connected by **red dash lines**.

Results and Discussions (rural area)

Information of sample numbers in different percentile groups of wind speeds and for different seasons based on the G1101 station.

Results and Discussions (rural area)

Fitting curve between the Hellman coefficients and the wind speeds on Shenzhen Meteorological Gradient Tower (GT) from 1 October 2016 to 1 January 2020

Vertical variation characteristics of Wind Speed in rural areas

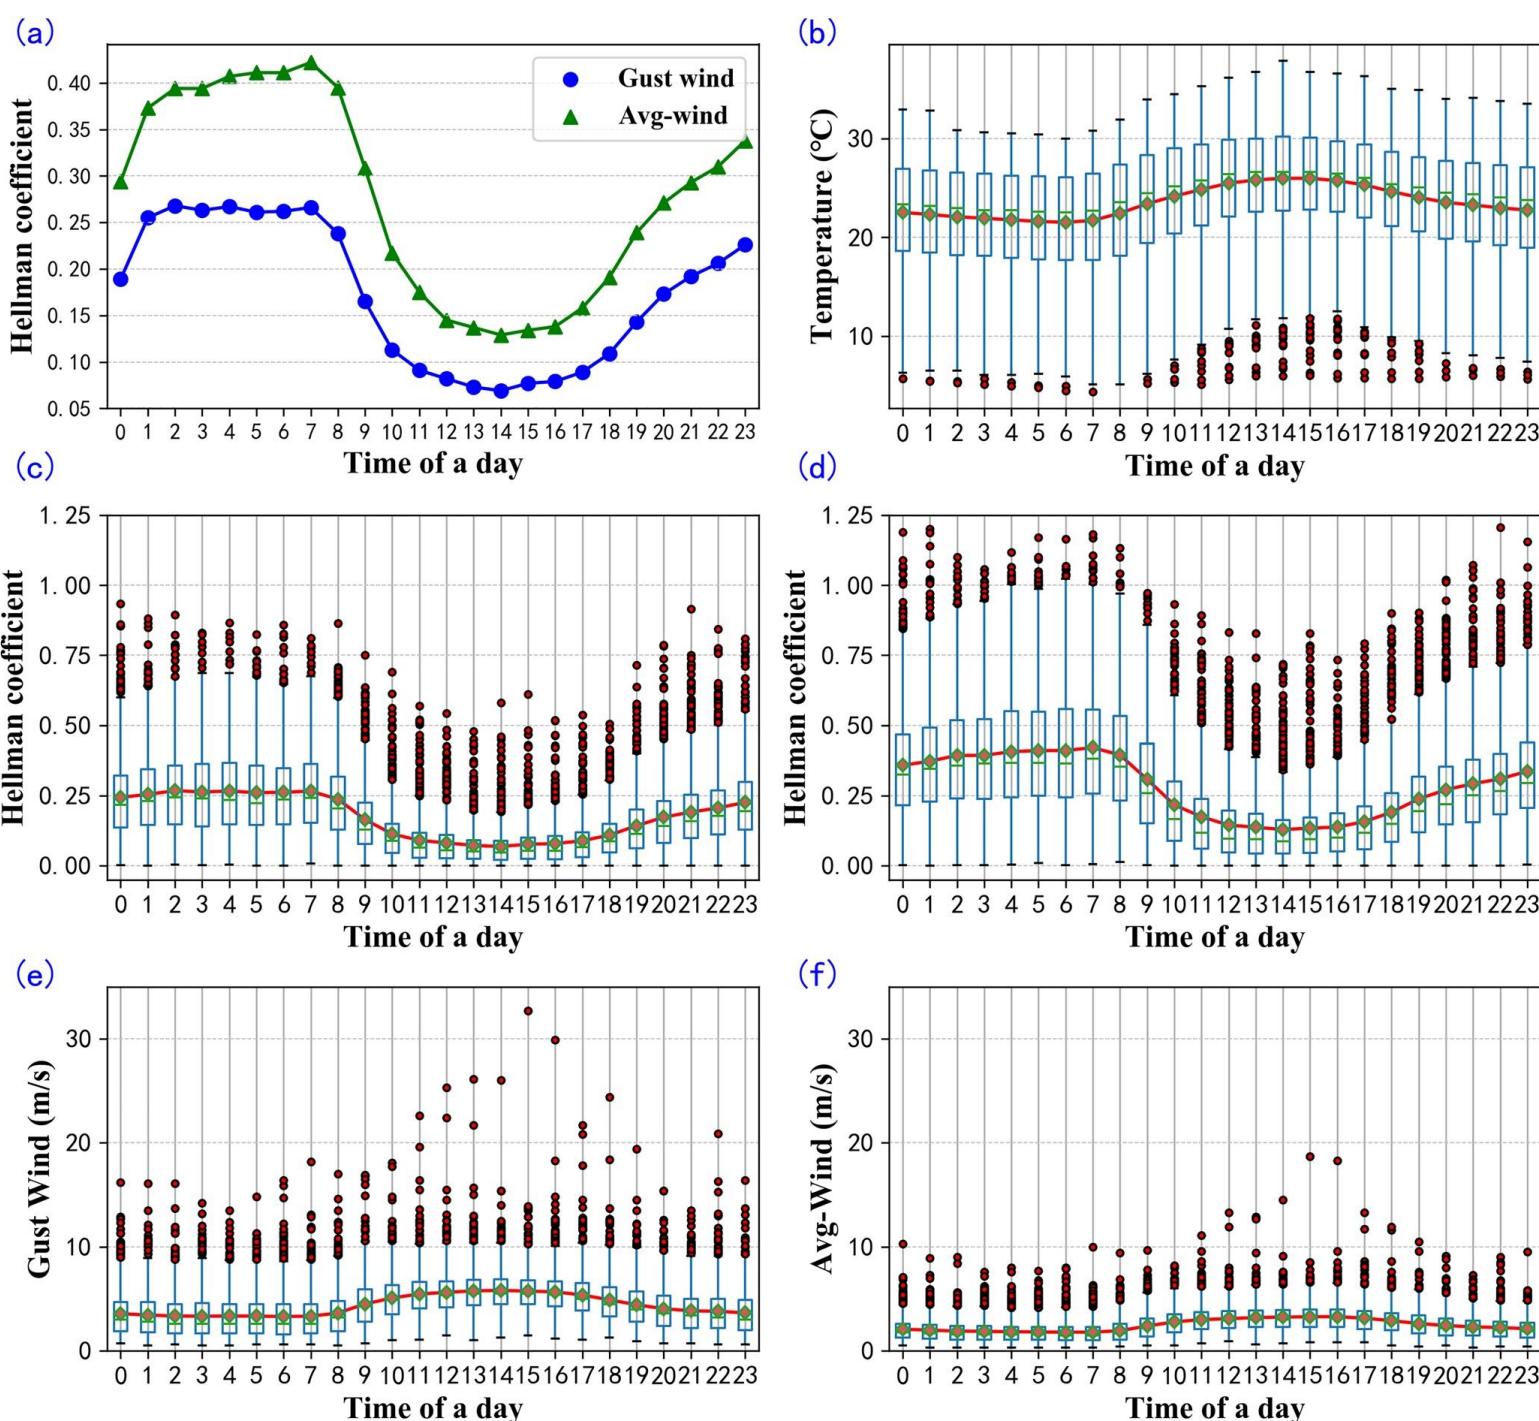

Results and Discussions (rural area)

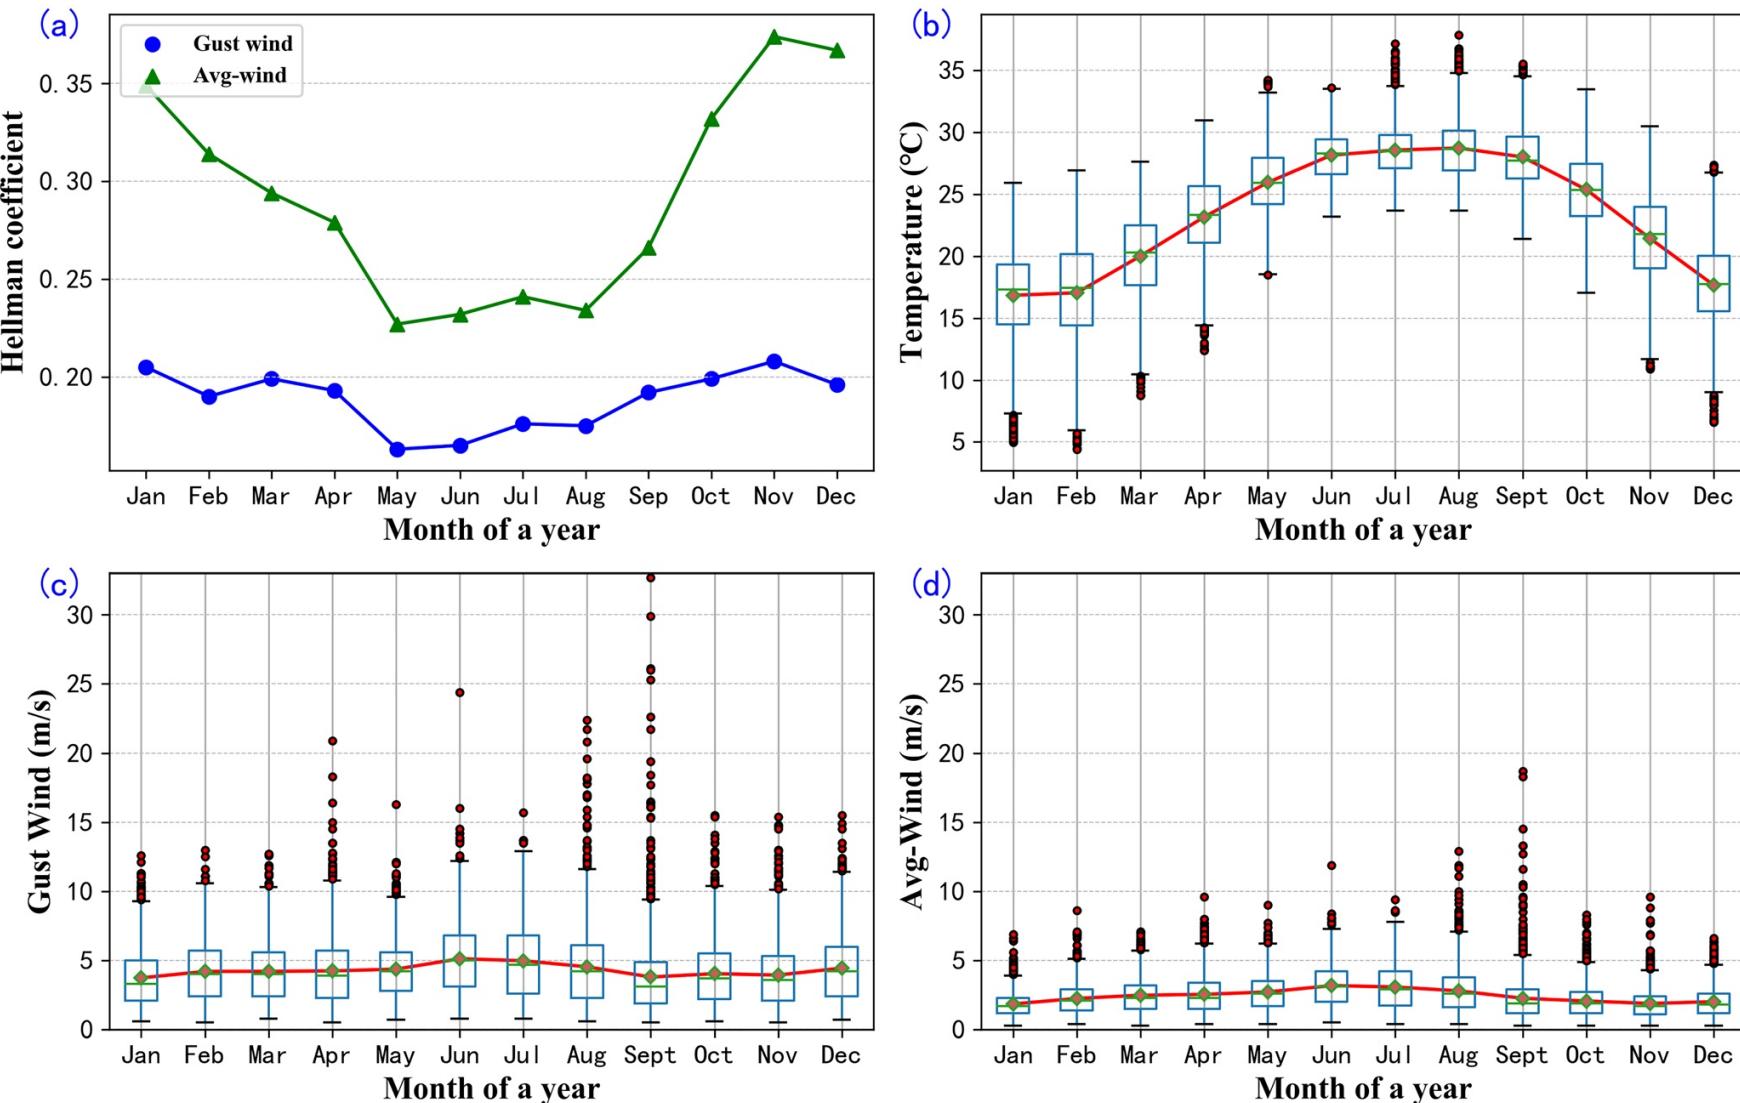

Diurnal variation characteristics of the vertical wind speeds over the rural area (a) the mean Hellman coefficient, (b) 10 m Temperature, (c) detailed Hellman coefficients for gust wind, (d) detailed Hellman coefficients for avg-wind (e) gust wind speeds at the G1101 station, and (f) avg-wind speeds at the G1101 station.

The diurnal variation of the Hellman coefficient values is almost opposite to the diurnal temperature change. The correlation between the two variables is -0.980 for the gust wind and -0.985 for the avg-wind.

Results and Discussions (rural area)

Monthly mean of the vertical variation characteristics of the wind speeds over the rural area
 (a) the mean Hellman coefficient,
 (b) 10 m Temperature, (c) gust wind speeds at the G1101 station, and (d) avg-wind speeds at the G1101 station.

Results and Discussions (urban area)

Results and Discussions (urban area)

Fitting curve between the Hellman coefficients and the wind speeds based on the Central Park station and Ping An Building Station from August 2018 to January 2021

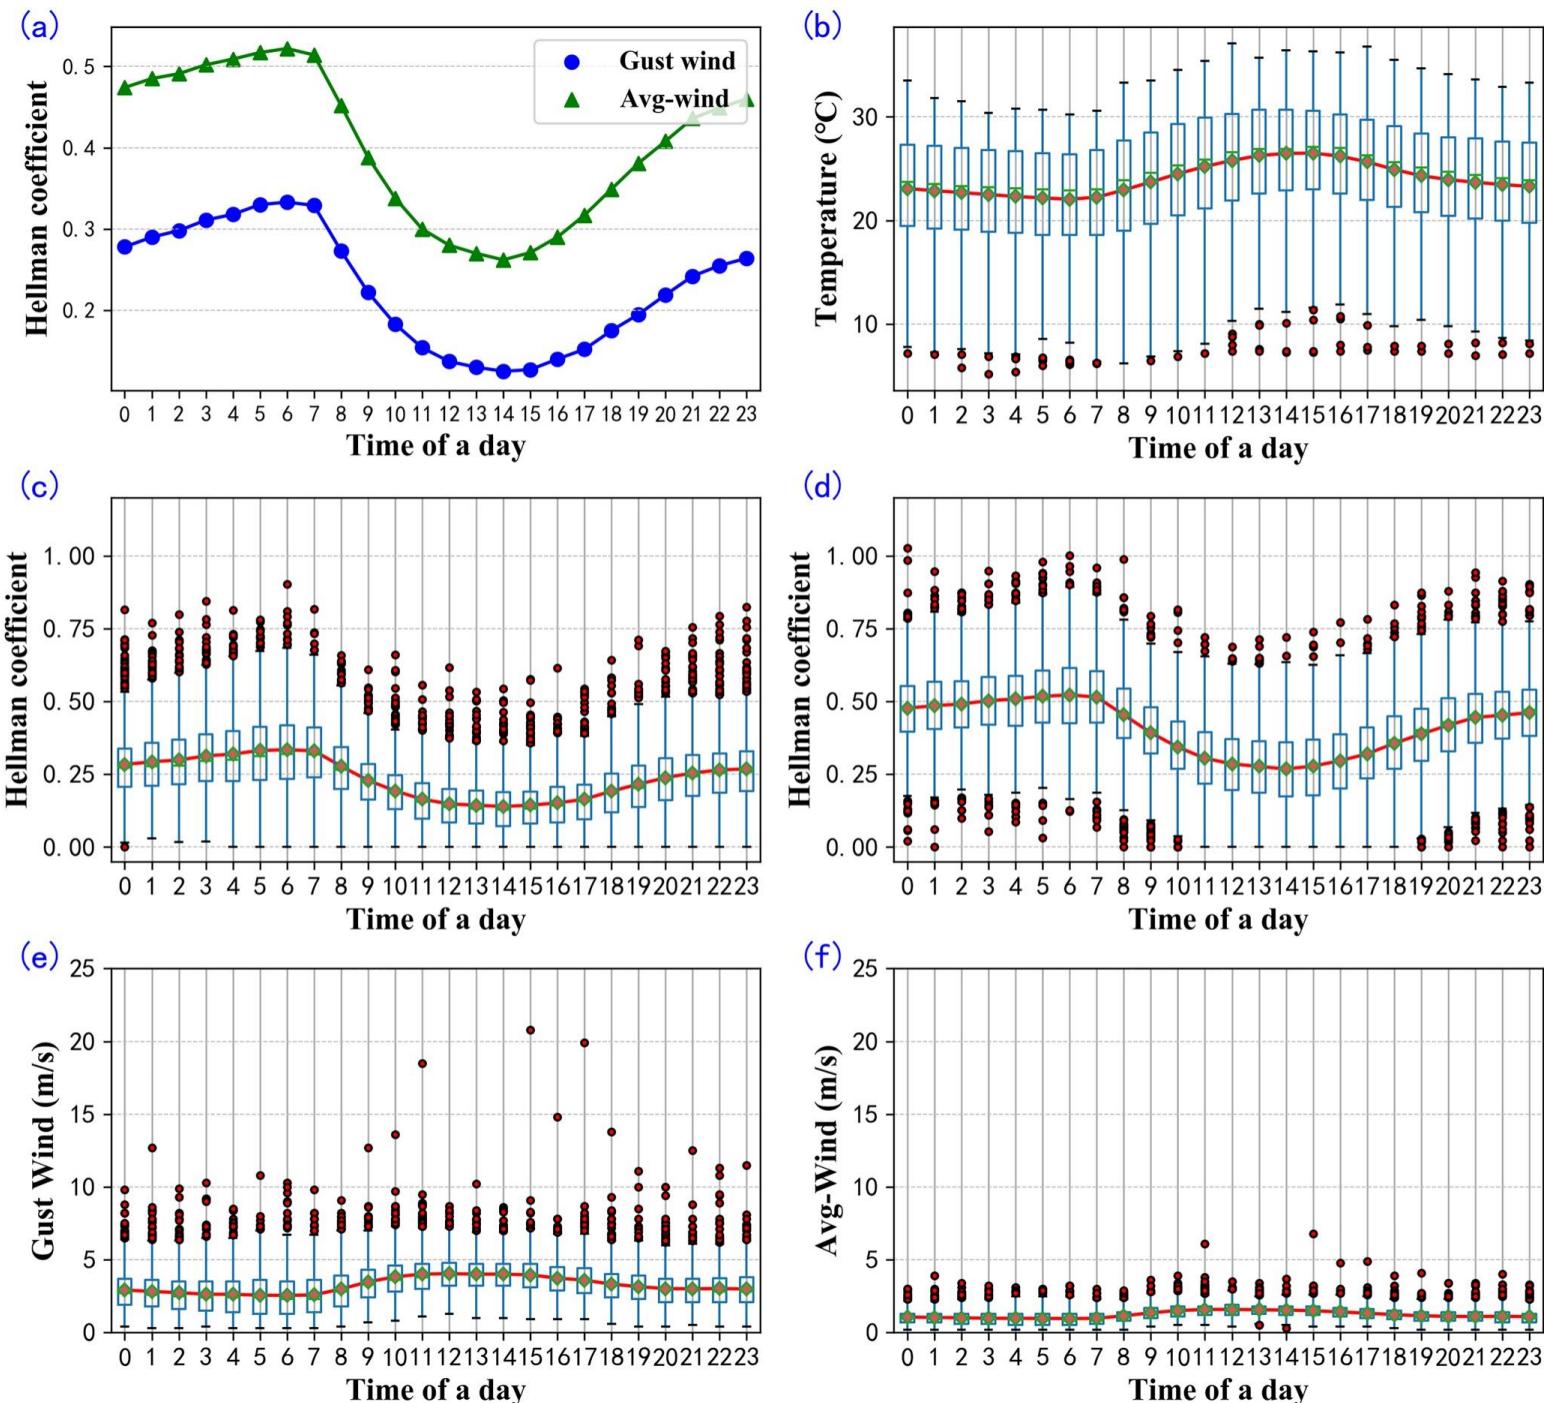

Vertical variation characteristics of Wind Speed in urban areas

Results and Discussions (urban area)

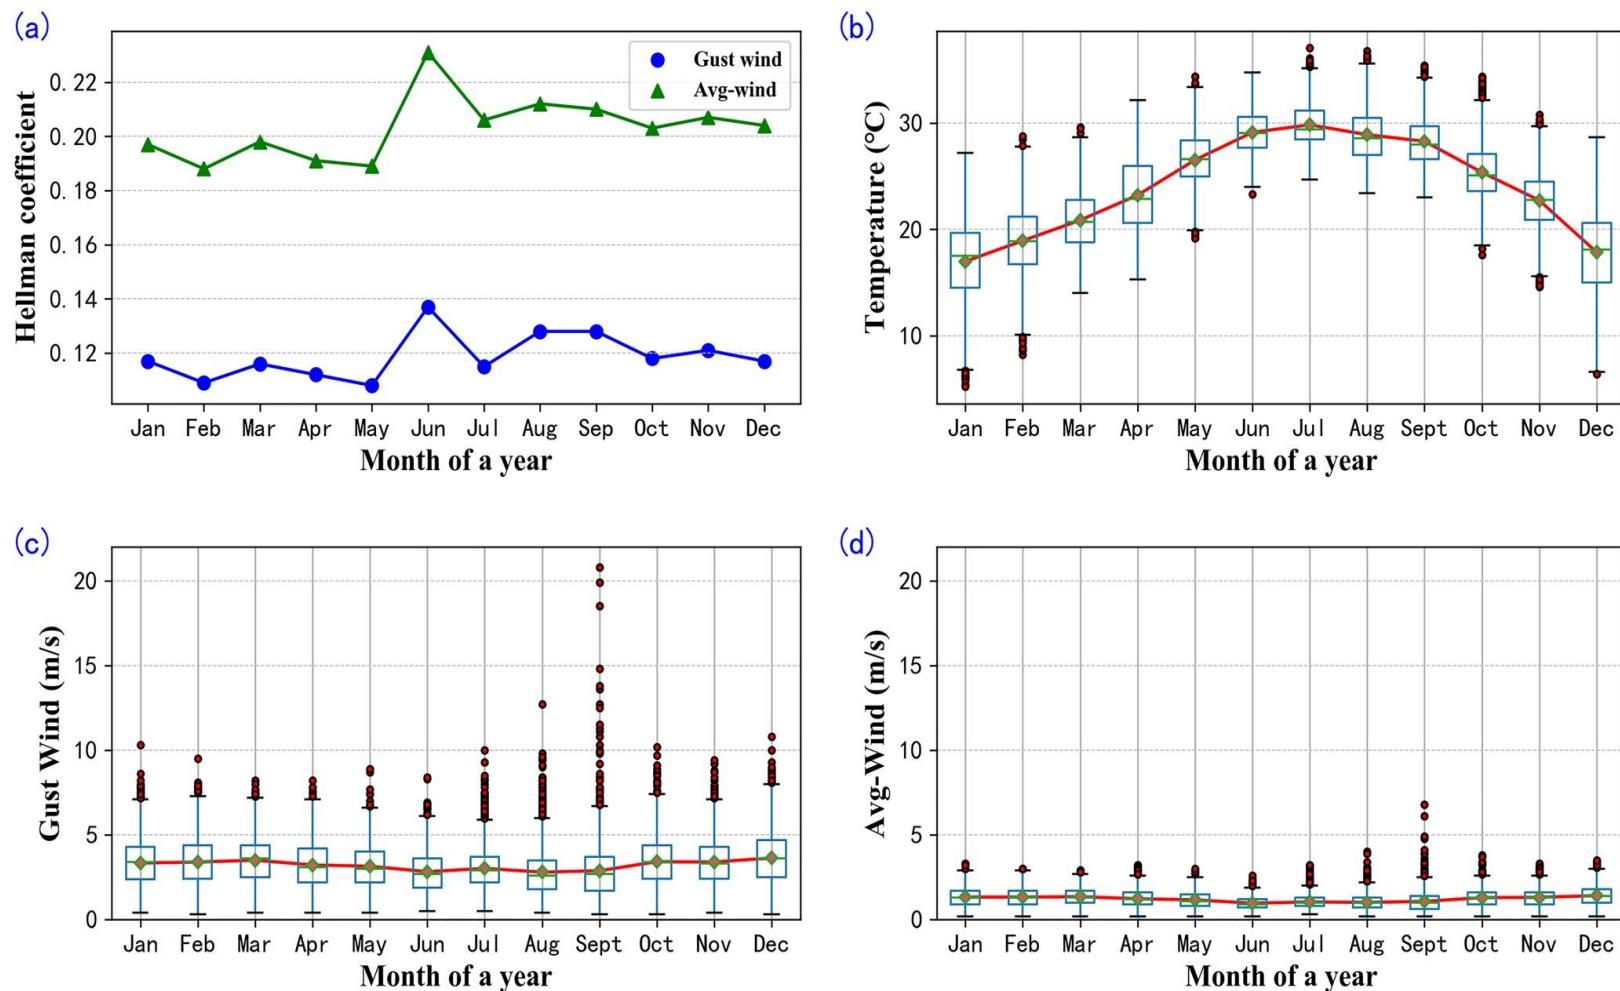

Diurnal variation characteristics of the vertical wind speeds over the urban area (a) the mean Hellman coefficient, (b) 14 m Temperature, (c) detailed Hellman coefficients for gust wind, (d) detailed Hellman coefficients for avg-wind (e) gust wind speeds at the G3773 station, and (d) avg-wind speeds at the G3773 station.

Similar to the rural open flat area, the winds tend to be larger during the daytime than the winds during the nighttime, corresponding to a lower Hellman coefficient during the daytime and a higher Hellman coefficient during the nighttime.

Results and Discussions (urban area)

Monthly variation characteristics of the vertical wind speeds over the urban area (a) Hellman coefficient, (b) 14 m Temperature, (c) gust wind speeds at the G3773 station, and (d) avg-wind speeds at the G3773 station.

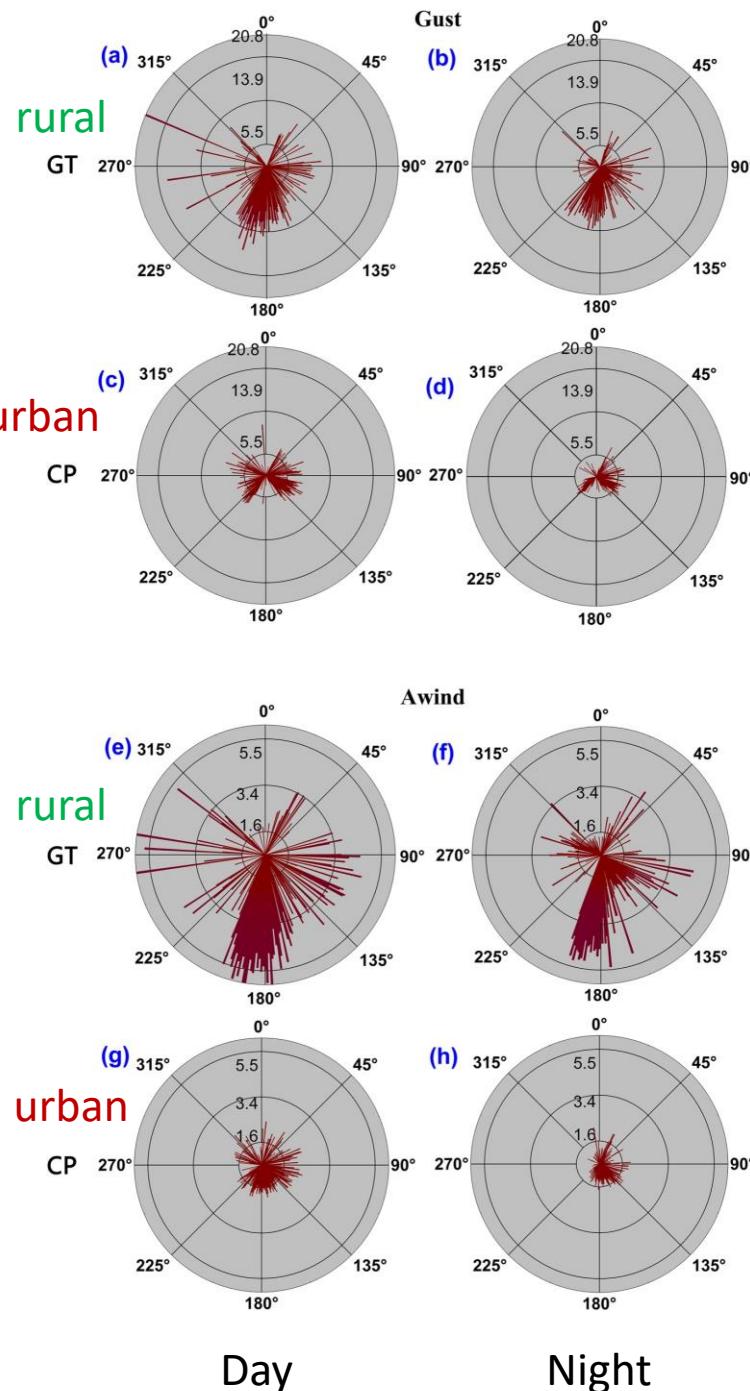

Results and Discussions

The Statistics Properties of the Monthly Gust Wind and Avg-Wind at G1101 (GT) and G3773 (CP) During the Daytime and Nighttime in June

Station	Item	Gust_day	Gust_night	Awind_day	Awind_night
Gradient Tower (rural)	Mean Wind	6.418	4.301	4.004	2.696
	Southerly	86.50%	78.48%	87.84%	80.55%
	Northerly	13.50%	21.52%	12.16%	19.45%
Central Park (urban)	Mean Wind	3.482	2.211	1.225	0.785
	Southerly	75.08%	78.72%	78.66%	82.12%
	Northerly	24.92%	21.28%	21.34%	17.88%
	Wind _{CP} / Wind _{GT}	/	0.543	0.514	0.306
					0.291

The wind rose diagrams for the gust wind (a–d) and avg-wind (e–h) observed at the Gradient Tower (GT, G1101) station and Central Park (CP, G3773) station during the daytime and nighttime in June.

Conclusions

- 风速通常随着高度的增加而增加，遵循**power law function**.
- 阵风和平均风的**Hellman**系数值随着风速的增加而减小，服从相对于风速的**exponential decay function**
- 当风达到高百分位水平（即 80% 左右）时， Hellman系数几乎保持恒定。
- 城市地区Hellman系数大于郊区，平均风速大于阵风风速。
- 郊区和城市地区的**Hellman系数存在明显的日变化**。通常在下午 2 点至 3 点左右达到最低值，此时是每日最高气温，并在早上 6 点至 7 点达到最高值，此时是每日最低气温。
- Hellman系数的**月变化在深圳城市区域不明显**，这可能与深圳的城市热岛效应有关。

WILEY

尊敬的Qinglan Li,

您好!

为帮助中国实现《国家“十四五”期间人才发展规划》中关于促进基础研究科技创新的重要目标, Wiley广泛传播以促进基础科学领域的创新。

为感谢中国作者在开放科学与促进科技创新中做出的巨大贡献, Wiley中国在较受中国作者认可的开放

您发表于 *EARTH AND SPACE SCIENCE* 期刊中的论文 *Vertical Wind Speed Variation in a Metrop* 的广泛关注, 在发表后的三个月内即获得了 251 次下载, 位居该期刊中国作者 2022 年第二季度发表度“Wiley 威立中国开放科学高贡献作者”。

“Wiley 威立中国开放科学高贡献作者”奖评选说明: 我们统计了较受中国作者认可的 Wiley 开放获取期刊 4 至 6 月的所有文章在发表后三个自然月的全文阅读下载量, 并从每本期刊中选择下载量最高的 5 篇。感谢作者“Wiley 威立中国开放科学高贡献作者”以感谢作者为开放科学做出的巨大贡献。
